

KEYWORDS

[swag](#) - tutorials - doing things swaggy way Parse gh-pages to .zite

STATUS

Initial commit, just started. Please, contribute. Wip.

CONTEXT

[question about wikism](#)

Iniciado por mmm hace 11 días con respuestas (1) > is there some light the "big plan" could bring for a more distributed wikist culture? i.e. to wikimedia features as: see what links here, text format, export, undo. or any these features into other type of contents (not only text, but i.e. photo). in the past there was a couple of whitepapers... if you want to add some more documentational bits about it, i'd like to forward it, cheers.

Creada por psy hace 4 días > ZeroWiki (first release launched yesterday):

DOCUMENT TYPE

Este documento es una receta spanglish para parsear una rama gh-pages [1] de un repositorio en un *.zite* [2].

[1] Docs on gh-pages, <https://help.github.com/categories/github-pages-basics/>

[2] Docs on Zite,

<https://zero.irka.io/138R53t3ZW7KdSfxVpWUsMXgwUnsDNXLP/?>

[Page:zite](#)

CONTENT

Vale, ok, I'm gonna take: Ataraxia Archive *gh-pages* [1] to set a demo while speeching de tutorial.

[1] Tutorial demo files: https://github.com/aleph1888/ataraxia_archive/tarball/gh-pages

¿Cómo se crea un .Zite?

Necesitas:

a) Un Content.json [1] especificando la *estructura del contenido*. Ver ejemplo html [2].

[1] Creación de un Content.json genérico: <https://irka.io/photos/image/1309/what-is-a-contentjson-file>

[2] Contenido demo files: Task #1: Parse index.html to Content.json:

https://github.com/aleph1888/ataraxia_archive/blob/gh-pages/index.html

Como de por sí el material que hay en gh-pages es 100% compatible con el material que se alberga en un *.zite*, you are done!

Extras

Come to irka with your [1] website (.zite) so it will be uploaded to darknet. Watch tutorial [2]!
